SWIPE OPTION BUTTONS

swipe to approve

swipe to pay

swipe to send

swipe to submit

Example of React Native Swipe Button

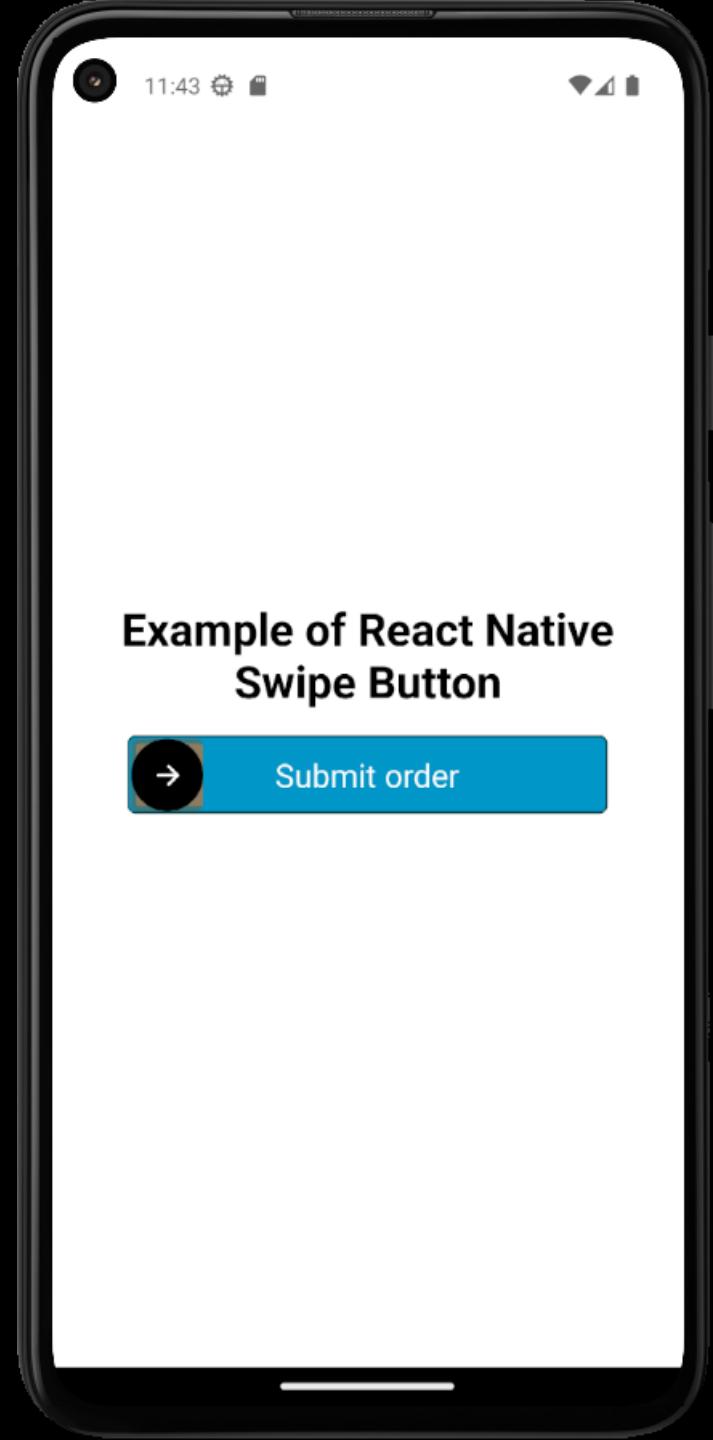

- Is a very interesting and attractive feature for submitting the form of any other thing which needs confirmation
- `npm install rn-swipe-button --save`

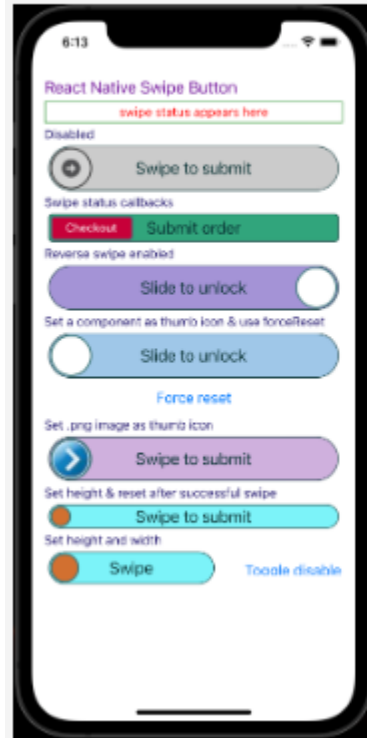

```

const SwipeButtonView = () =>
{
  return (
    <View style={styles.container}>
      <Text style={styles.titleStyle}>
        Example of React Native Swipe Button
      </Text>
      <SwipeButton
        containerStyles={{ borderRadius: 5 }}
        height={45}
        width={'80%'}
        disabled={false}
        railBackgroundColor="#0096c7"
        railStyles={{ borderRadius: 5 }}
        title="Submit order"
        titleColor=' #FFF '
        thumbIconComponent={ThumbIconComponent}
        thumbIconBackgroundColor="#000"
        thumbIconBorderColor="#000"
        onSuccess={() =>
          {
            alert('Submitted Successfully!');
          }
        }
      />
    </View>
  )
}

```

ALERT

AlertDialogExample

Do you want to close this application ?

CANCEL

PROCEED

- Display an overlay on top of app screen with the specified title and message dialog
- An API that works both on Android and iOS and can show static alerts
- Various options to enable configuration
 - OK Button
 - Yes / No Button - Positive or Negative option

```
import{  Alert} from "react-native";
```

METHOD

- **alert** (title: string, message?: string, buttons?: AlertButton[], options?: AlertOptions,)

NAME	TYPE	DESCRIPTION
title Required	string	The dialog's title. Passing <code>null</code> or empty string will hide the title.
message	string	An optional message that appears below the dialog's title.
buttons	<code>AlertButton[]</code>	An optional array containing buttons configuration.
options	<code>AlertOptions</code>	An optional Alert configuration.

AlertButton

- An object describing the configuration of a button in the alert

NAME	TYPE	DESCRIPTION
text	string	Button label.
onPress	function	Callback function when button is pressed.
style 	AlertButtonStyle	Button style, on Android this property will be ignored.
isPreferred 	boolean	Whether button should be emphasized, on Android this property will be ignored.

AlertOptions

- An object describing the configuration option

NAME	TYPE	DESCRIPTION
cancelable • Android	boolean	Defines if alert can be dismissed by tapping outside of the alert box.
userInterfaceStyle • iOS	string	The interface style used for the alert, can be set to <code>light</code> or <code>dark</code> , otherwise the default system style will be used.
onDismiss • Android	function	Callback function fired when alert has been dismissed.

Alert In Android

- At most three buttons can be specified
- Android has a concept of a neutral, negative and a positive button:
 - If you specify one button, it will be the 'positive' one (such as 'OK')
 - Two buttons mean 'negative', 'positive' (such as 'Cancel', 'OK')
 - Three buttons mean 'neutral', 'negative', 'positive' (such as 'Later', 'Cancel', 'OK')

SAMPLE

```
Alert.alert("Oops!",  
  "At least 3 chars in length",  
  [{text: "Understood",  
    onPress:()=>  
      console.log("Close alert dialog")}],  
  {cancelable: false}  
)
```
